

We are delighted to have XM radio and are pleased to have access to many more stations than we could get before since we live too far north of Houston to get good Houston reception and too far south of Dallas to get good Dallas reception. No one criticized us for buying a satellite dish to improve our TV reception. Being able to hear radio weather and traffic information on the city to which we are traveling is a great advantage for us. I hope you will allow us to continue to get this service. Shutting it down would be an indication to us that you are more interested in serving political donors and lobbyists than in serving the people your commission was formed to serve.
